

Using Zoom for Meetings and Class

Your professor may be using Zoom for teaching. You and classmates may also be using it to have meetings, for instance as you work together on team projects. Or maybe you just want it as an option for these or other uses.

Zoom is super easy to use, and you can learn most of the important features in mere minutes with just a few select documentation videos. Every blue underlined phrase below is a clickable hyperlink that takes you to the relevant webpage or video.

From the company's "[How To Zoom](#)" YouTube page, you'll find lots of helpful videos. Other good documentation is all over the internet. This list that should have you up and running, but a quick online search will usually help you learn how to do anything else you might need.

For Everyone, Including Students and Users

Students and users who are not hosting can learn almost everything you need with the following quick tips. (Hosts should also learn all of this, too.)

- [Join a Meeting](#) (the instructions tell you how to install the application, but on a PC or Mac, you can also [join a Zoom meeting from in your browser](#))
- [Joining & Configuring Audio & Video](#)
- Mobile app overviews for [Zoom on iOS](#) or [Zoom on Android](#)
- [Nonverbal Feedback During Meetings](#) (such as raising your hand)

For Meeting Hosts

Anyone hosting meetings will want to know the content above plus:

- [Zoom 101 Sign Up & Download Meeting Client](#) (if you're hosting, you really want to run the application instead of trying to host it in your browser)
- [Scheduling a Meeting](#) (including how to get invitation information you can copy and paste into Blackboard, an email, etc.)
- [Meeting Controls](#) (including managing users, screen sharing, annotations in screen sharing, and how to record a session)
- [Video Breakout Rooms](#)
