This course program, he	burse Description: will cover how computers are compromised, what one needs to do to build security into every ow cryptography assists in securing data, how operating systems affect computer security, how re secured, and the social and ethical aspects of computer security.
Specific Va	ariable Topics Course Description (if applicable, umbrella course description included above):
Stallings, V	Reading and Other Materials will be equivalent to: Villiam & Brown, Lawrie. (2015). Computer Security: Principles and Practice. 3 rd edition. Upper er, NJ: Prentice-Hall. ISBN-13 978-0133773927
Upon comp 1. Ass 2. De 3. Ex 4. De 5. Ev 6. Ex 7. De	deasurable Student Behavioral Learning Objectives: oletion of this course the student should be able to: sess the threats faced by computers scribe the methods for defending against attacks. plain how cryptography works and how to apply it. scribe how viruses, worms, etc., attack programs and systems. aluate fixes for system and network attacks. plain how to protect systems and networks against typical methods of attack. scribe operating system security controls. spare controls to detect host and network intrusions.
Detailed O	utline of Course Content (Major Topics and Subtopics):
I. II. IV. V.	What is computer security? Basic types of attacks Basic countermeasures Introduction to cryptography How to secure programs A. Sources of errors B. Auditing programs by hand and with tools. C. Run-time mitigation of program flaws.
VI. VII. VIII.	Protecting operating systems A. Memory protection B. User authentication C. File protection Trusted operating systems Network security
A 111.	Holmork Southly

IX.

X.

A. Firewalls

B. Network intrusion detection

Security administration Security, privacy, and ethics Prefix and Course Number: CS 3750

Evaluation of Student Performance:

A combination of the following:

- 1. Final Examination
- 2. Assignments
- Quizzes and Examinations
 Research papers and/or Book Reports
- 5. Oral Presentations
- 6. Programming Projects
