

Elevate daily tasks with a blend of productivity and play. As you achieve, your virtual garden thrives. Merge calendars, lists, and journals into a fulfilling journey where every accomplishment brings life to your plant. Rediscover joy in every tick and let motivation blossom!

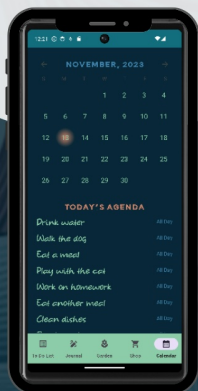

Task List

Any task, big or small, can be added to the list to earn points

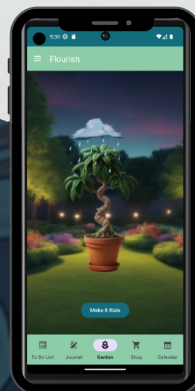

Calendar

Allows you to see and assign tasks to certain days

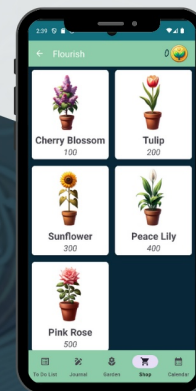

Garden

Plants start as small shoots that grow as you accomplish tasks

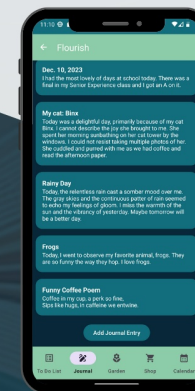

Shop

Will allow the purchase of new plants with earned points
Coming Soon!

Journal

Keep track of your progress, ideas, thoughts, and feelings

Flourish gamifies daily tasks by integrating them with virtual plant care. Users complete tasks to earn points, nurturing plants from seeds to full bloom. This productivity app combines task lists, journaling, and scheduling, promoting positive reinforcement and continuous personal growth.

Developed over 16 weeks using Kotlin and Android Studio, *Flourish* combines task management with a virtual greenhouse. Our agile development approach focused on user-friendly design and seamless integration of diverse features, ensuring an engaging and intuitive experience.

Our journey with *Flourish* taught us the value of agile methodologies in app development, especially in integrating complex features into a unified user experience. Team collaboration and adaptability were crucial in overcoming technical challenges and enhancing our professional skills.

Future enhancements for *Flourish* include location-based rewards for visiting health-promoting places and fully implementing the shop feature to expand users' virtual gardens. These upgrades aim to deepen the app's impact on users' physical and mental well-being.
