

Visiting Artist Lunch Talk

Dr. Melissa Grant

melissa Grant is a founding member of the High Altitude Bioprospecting (HAB) team, developing methods for the detection and culture of microbes from the stratosphere and understanding the desire for such a blue skies endeavour. This research has taken the HAB team from Black Rock Desert in Nevada to the sub arctic in Northern Finland to the Venice archipelago in Italy in their search for microbes. The microbes found have been associated with regions - such as Arctic and even Antarctic species - and have formed the basis of several art-science exhibitions.
