Team PC Build Challenge

Build a PC with your Teammates

MSU DENVER The Cybersecurity Center
Cybersecurity Multi-Use Training Environment

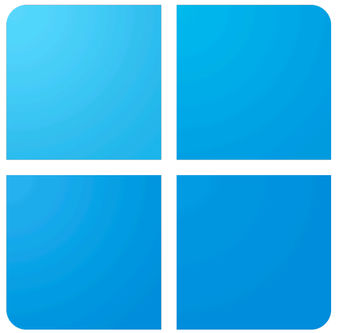
Put together a PC

- Work together to build a PC
- You will need to install the PSU, Memory Modules, NVMe Drive, Motherboard into a non-standard case
- No instruction manual is provided, rely on your team's collective knowledge
- You can all choose to do individual builds or one for the entire team
- Remember to ask for help!

MSU DENVER The Cybersecurity Center
Cybersecurity Multi-Use Training Environment

Install an Operating System

- Now work together to make it usable
- Choose one of these operating systems to get your range passwords:
  - Debian 12.11.0
  - Windows 11 Pro
  - NetBSD 10.1



Wrapping Up

- What was the most challenging part of the build?
- What did you learn about PC building that you didn't know before?
- How will you apply today's problem-solving approach to the range?
