Key Insights:

- Architecture matters early
- Large Kanban cards obscure real progress
- Shipping in iterations is better than waiting for it to be perfect

How SafeHands was Built:

Methodology: Agile w/ Kanban Board

Collaboration: weekly team meetings, branch-per-feature workflow

Frontend: Flutter, Dart, Riverpod

Backend: Node.js, Express.js, TypeScript

Database: PostgreSQL, Drizzle schema & migration

Who is this app for?

- Caregivers managing family medications
- Informal care settings without access to clinical software
